Project ID : 00019102/0001 **Project Established**
ICS : 87.040
National Ref : 19102
Title : NCS ATLAS (NCS Colour atlas)
Scope : The colour atlas contains 42 pages of colour samples. **The first page**
presents an NCS-colour circle with 40
colour samples of high chromaticness, representing
the hues selected for the atlas. **The second page**
includes colour samples for nonchromatic (purely grey) colours and slightly chromatic(near-
grey) colours. The remaining 40 pages each include an NCS triangle, which displays the hue
indicated on the page. **The colour samples have been chosen so that**
they
illustrate the NCS-system at even intervals, in principle
at every tenth NCS-coordinate. A large number of samples have been added in frequently
used colour areas. In this way, the selection is not trenddependent and it is thus practically
useful with colour samples in all the visual colour areas throughout the colour space for all
professional colour
communication. **For economic reasons, the number**
of colours is limited
to 1950. In some triangles, a thinning has taken
place in the non-chromatic region - where it is
anyway difficult for the eye to distinguish between
colours in adjacent hues. For reasons of pigment
technology, colour samples are lacking along the
outer edges and at the apex of each triangle. It has
not been possible to manufacture these colours with
existing pigments and with an opaque NCS-lacquer

paint according to NCS-quality requirements.

ICS : 21.040.10
National Ref : ÖNORM ISO 965-4
Title : ISO general purpose metric screw threads — Tolerances — Part 4: Limits of sizes for hot-dip galvanized external screw threads to mate with internal screw threads tapped with tolerance position H or G after galvanizing
Scope : This part of document specifies limit deviations and limits of sizes for the pitch and crest diameters of the hot-dip galvanized metric external screw threads conforming to the coarse thread series of ISO 262 (from M10 to M64) having a basic profile according to ISO 68-1. This part of document is applicable to the hot-dip galvanized metric external screw threads to mate with the internal screw threads tapped with tolerance position H or G after galvanizing. Products made with thread tolerances in accordance with ISO 965-4 may show failure at lower ultimate tensile loads than those specified in ISO 898-1 due to reduction of the stress area. External screw threads with thread tolerances according to ISO 965-4 must not be mated with internal screw threads with thread tolerances according to ISO 965-5 because such combinations will create severe risk for thread stripping. NOTE After the hot-dip galvanization the external threaded products with the tolerance class 6az shall be centrifuged immediately.

Title : ISO general purpose metric screw threads — Tolerances — Part 5: Limits of sizes for internal screw threads to mate with hot-dip galvanized external screw threads with maximum size of tolerance position h before galvanizing — AMENDEMENT 1
Scope : This part of ISO 965 specifies deviations and limits of sizes for pitch and crest diameters for ISO general purpose metric internal screw threads conforming to the coarse thread series of ISO 262 (from M10 to M64) having basic profile according to ISO 68-1. Internal screw threads according to this part of ISO 965 are intended to mate with external screw threads with maximum size of tolerance position h before hot-dip galvanizing. Note: After the hot-dip galvanizing the internal threads are tapped, no galvanizing coating on the surface of internal threads.

Title : Acoustics - Evaluation of the uncertainty of measurements and calculations in acoustics -
 Parte 1: General concepts
Scope : This technical specification gives to the user guidelines for the evaluation of the uncertainty
 of measurements and calculations in acoustics, according to UNI CEI ENV 13005. The
 standard presents the fundamental rules for the evaluation and expression of the
 uncertainty associated to the results of measurements and calculations in the field of applied
 acoustics.

Title : Acoustics - Evaluation of the uncertainty of measurements and calculations in acoustics -
 Part 2: Compliance with specifications
Scope : The standard specifies the rules to assess whether the result of an acoustic measurement is
 conforming with a given tolerance interval, or with a limiting value, taking into account the
 measurement uncertainty. The methods prescribed by the legislation will override the one
 described in this standard. In the absence of such legislation in the field of applied acoustics
 the standard specifies how to assess the conformity with specifications.

Title :	Medical gas pipeline systems - Connectors for medical gases		
Scope :	Specific gas connectors for quick couplings aims to prevent incorrect connection to gas outlets for medical gases. The quick connection of the gas outlet is the point in the medical gas supply system, where the user makes frequent connections and disconnections of medical gases to medical devices such as anaesthetic equipment, lung ventilators. An incorrect connection can pose a significant risk to the patient's life. The standard states requirements for dimension, construction, joining, testing, and marking of quick couplings for medical gases and evacuation of excess anaesthetic gas.

Title : Road restraint systems. Methods of measurement for loads transmitted by vehicle parapets to structures. Part 1: vehicle parapets with discrete interaction with the structure.
Scope : This standard defines the general terms and the procedure to be followed for the performance of specific impact tests for the measurement of the maximum loads that a parapet, i.e. a system intended to be installed on a bridge deck, retaining wall or similar structure, transmits to the structure on which it is installed.

The standard is divided into 2 parts:

- Part 1: Parapets with point interaction with the structure.
- Part 2: Parapets with continuous interaction with the structure.

The procedure described in Part 1 is applicable to designs of restraint systems consisting of components that are attached to the outer surface of a deck or similar structure by means of specific fasteners defined by the manufacturer. It is not applicable to systems constructed in situ with continuity of the materials of the deck or structure.

The values obtained by this procedure constitute a measurement of the maximum forces transmitted by a containment system in accordance with the specifications of the UNE EN 1317-1:2011 Standard.
