Title : Burnt oil-shale for building materials
Scope : This standard gives a specification for burnt oil shale, which is produced from the combustion of pulverized oil shale in energy generation plants, followed by dry separation of produced fine dispersed mineral particles. Burnt oil shale consists of clinker minerals, quicklime, dehydrated calcium sulphate, glass phase and insoluble residue. There are three types of burnt oil shale, which conform to this standard: 1. burnt oil shale, separated by electric filters, for production of cement - burnt oil shale for cement; 2. burnt oil shale, separated by cyclone filters, for production of aerated concrete - burnt oil shale for aerated concrete; 3. burnt oil shale, separated by textile filters, for production of concrete - burnt oil shale for concrete. Standard defines the characteristics, test methods and evaluation of conformity of burnt oil-shale.

Title : Banking and related financial services -- The pattern of the form for credit transfer/cash payment (WP)

Scope : The standard contains technical requirements (size, description of form elements) for money transfers and cash payment forms and guidelines how should retail and corporate clients fill them. The standard also specifies a bar code necessary for creating an electronic message containing information which identifies the transaction. The standard encloses annexes (normative) containing examples of filled WP forms

Title : Collaborative business relationship management - Framework

Scope : This International standard specifies requirements for the effective identification, development and management of collaborative business relationships between discrete organizations. It is applicable to organizations of all sizes from large multinational corporations to micro/small businesses. Whilst this International standard principally

addresses the management system of an organisation it also recognises that effective collaboration requires two or more organisations engage together thus management systems must accommodate the joint activities of the parties This International standard has to be tailored to the size of the organizations involved, application of and/or compliance with this International standard can be on several different levels, an individual relationship (including one-to-one relationships, alliance, partnership, joint venture); multiple identified relationships (including multiple partner alliances, consortia, joint ventures, networks, and end-to-end supply chains); full application companywide for all identified relationship types. The deployment of collaborative approaches does not deflect from any requirements to maintain open and free competition. Collaborative approaches are expected to be able to operate in unison with either legislative and regulatory requirements or policies, whether corporate or governmental, aimed at ensuring open and free competition, such as the European Procurement Directives. This International standard does not cover business-to-consumer relationships or employer-employee relationships.

Title :	Quality management systems - Customer satisfaction - Guidelines for complaints handling in organizations		
Scope :	This International Standard provides guidance on the process of complaints handling related to products within an organization, including planning, design, operation, maintenance, and improvement. The complaints-handling process described is suitable for use as one of the processes of an overall quality management system. This International Standard is not applicable to disputes referred for resolution outside the organization or for employment-related disputes. It is also intended for use by organizations of all sizes and in all sectors. Annex A provides guidance specifically for small businesses. This International Standard addresses the following aspects of complaints handling: a) enhancing customer satisfaction by creating a customer-focused environment that is open to feedback (including complaints), resolving any complaints received, and enhancing the organization's ability to improve its product and customer service; b) top management involvement and commitment through adequate acquisition and deployment of resources, including personnel training; c) recognizing and addressing the needs and expectations of complainants; d) providing complainants with an open, effective, and easy-to-use complaints process; e) analysing and evaluating complaints in order to improve the product and customer service quality; f) auditing of the complaints-handling process; g) reviewing the effectiveness and efficiency of the complaints-handling process.

Title : Solid residues from combustion - Determination of total sulfur in solid residues using a high temperature combustion method with an IR-detection procedure
Scope : The standard describes a method for determination of total sulfur content of ashes and other solid residues from the combustion of solid fuels. The method is a relative method that requires standard reference materials for calibration. The method was originally used for coal fuels, and has been processed to be useful to ashes and other solid residues. The

method can be used for sulfur levels greater than 0.05% (mass fraction in %).
