Subsector A02: CLEANING SERVICES

Subsector : A02 **Registration Date :** 2015-12-21
Organization : ASI
Country : Austria
Project ID : 00026666/0001 **Project**
Established
ICS : 03.080.30
National Ref : ÖNORM D 2040
Title : Cleaning services - Training and training centres for cleaning of monuments, facades and buildings as well as house maintenance
Scope : This Austrian standard regulates the minimum standards for the training of cleaning services of monuments, facades and buildings and house care. This Austrian standard supports learning services provider in the field of cleaning services in the fulfillment of ÖNORM ISO 29990, in particular sections 4.6 " Human resources management" and 4.8 " allocation of resources". The present ÖNORM allows to the public and private client a comparison of training in commercial cleaning in terms of the used cleaning and inspection staff.

Country : Austria
Project ID : 00026667/0001 **Project**
Established
ICS : 03.080.30
National Ref : ÖNORM D 2050
Title : Cleaning services - Performances in square meter in the field of cleaning of monuments, facades and buildings
Scope : This Austrian standard regulates figures for cleaning services depending on the level of cleaning, room areas and use of rooms. This Austrian standard specifies the maximum performances in square meters (m2- performances), which the employees have to provide, depending on the activities and requirements of their employers. Through a scheme under the collective agreement for monuments, facades and building cleaning, the respective m2- performance was declared for binding both the employers and employees.

Subsector A05: MAINTENANCE SERVICES

Subsector :	A05	Registration Date :	2015-12-30
Organization :	EVS		
Country :	Estonia		
Project ID :	00089052/0001	Project	Established
ICS :	01.040.03, 03.080.30, 03.080.99		
National Ref :	prEVS 910		
Title :	Procurement documents for property maintenance and their preparing guide		
Scope :	This National Standard defines the main concepts for property maintenance procurement. Instructions, forms and ideas are given for rational and high quality procurement and accompanying documentation. The scope includes the following complex activities from EVS 807:2010: code 100 (administration of the property), code 200 (technical maintenance), code 300 (cleaning and waste disposal). In most cases, not many independent activities are necessary for property maintenance. The mentioned activities (administration of the property, technical maintenance, cleaning and waste disposal) are minimal to ensure safety when using the property. As a rule, the activities should be done by: - the procurer (e.g. administration of the property service, could be bought in); or - the tenderer (technical maintenance, cleaning and waste disposal). The property owner should decide on the administration type and organising (whether the services are bought in or not). This standard assumes that services are bought in. Other complex activities mentioned in EVS 807:2010 are not very universally used and depend on the specific property and the wishes of its users (e.g repairs, owner's duties, consumable services, supporting services). For this reason, these activities do not belong to the scope of this standard.

Project ID : t0105379/0001 Project Established
ICS : 91.100.30
National Ref :
Title : Standard practice for selecting proportions and mix design for mass concrete
Scope : Mass concrete is defined as “any volume of concrete with dimensions large enough to require that measures be taken to cope with generation of heat from hydration of the cement and attendant volume change to minimize cracking.” The design of mass concrete structures is generally based on durability, economy, and thermal action, with strength often being a secondary, rather than a primary, concern. The one characteristic that distinguishes mass concrete from other concrete work is thermal behavior. Because the cement-water reaction is exothermic by nature, the temperature rise within a large concrete mass, where the heat is not quickly dissipated, can be quite high. Significant tensile stresses and strains may result from the restrained volume change associated with a decline in temperature as heat of hydration is dissipated. Measures should be taken where cracking due to thermal behavior may cause a loss of structural integrity and monolithic action, excessive seepage and shortening of the service life of the structure, or be aesthetically objectionable. Many of the principles in mass concrete practice can also be applied to general concrete work, whereby economic and other benefits may be realized.

Title : ECBCheck quality evaluation model for courses and programmes with a strong component in e-learning. Requirements

Scope : This standard describes the technical requirements to be observed in the promotion of courses and programmes with a strong component in e-learning. This standard aims to raise the quality levels of service delivery and accountability of organizations operating in the market with this type of services, measures the degree of success of courses and programmes and supports continuous improvement. It can be used both by the organization itself for the purposes of self-assessment, such as external entities for the purpose of certification services. This standard applies to any promoter organization of education and training with strong emphasis on e-learning, regardless of their size, geographic location, legal status (public or private) and commercial purposes (with or without profit).

Organization : ASI
Country : Austria
Project ID : 00026655/0001 Project
Established
ICS : 13.060.01
National Ref : ÖNORM ISO/TS 13530
Title : Water quality - Guidance on analytical quality control for chemical and physicochemical water Analysis (ISO/TS 13530:2009)
Scope : ISO/TS 13530 provides comprehensive guidance on within laboratory and between laboratory quality control for ensuring the production of results with a known level of accuracy in the analysis of waters. ISO/TS 13530:2009 is applicable to the chemical and physicochemical analysis of all types of waters. It is not intended for application to the analysis of sludges and sediments (although many of its general principles are applicable to such analysis) and it does not address the biological or microbiological examination of water. Whilst sampling is an important aspect, this is only briefly considered.
