Country : Spain **Latest Date for Comments :** 2016-04-16

Project ID : P0043316/0002 **Draft for public enquiry**

ICS :

National Ref : PNE 310001

Title : Motor vehicle repair workshops. Requirements for the provision of their services.

Scope : The aim of this standard is to define the requirements that must meet the vehicle repair workshops for the provision of their services in the following matters: industrial safety, quality and environment, regardless of which apply to them in accordance with legislation.

The standard covers the maintenance, installation, removal, replacement and repairing of motor vehicles, equipment systems, components and accessories installation, as well as reform and / or adaptation of such vehicles.

The standard also covers services provided both inside and outside motor vehicle repair workshops.

The standard applies to motor vehicle repair workshops duly authorized by the competent authority in accordance with applicable law for the conduct of that business, in any of its branches and specialties and subspecialties.

Organization : EVS
Country : Estonia
Project ID : 00089957/0001 **Project**
Established
ICS : 91.010.01
National Ref : prEVS 932
Title : Building Design
Scope : The standard deals with the scope, composition and the level of precision of the information to be submitted in the building design of a house, erections of landscape design, a road and utility networks. The core of the subject-matter includes the design tasks to be accomplished in the course of the drawing up of a building design, the information to be presented and its level of precision. The standard defines the main terms and definitions being applied in design work and drawing-up a building design. The principles of building-design and the stages of building-design are defined together with their goals and scope. The major design fields of building-design are defined. The principles of design management and the scope and

range of the activities of a party which is conducting and coordinating the drawing up of a building design are described. The basis data and design briefs essential for the drawing up of a building design are described. Requirements are set to the scope of a building design and to the precision of the information to be submitted along the design fields and design stages. The standard does not include guidelines or rules for the formal presentation of a building design and design documents.

Title : Information Technologies. Cloud Computing. Labelling systems
Scope : The objective of this standard is the identification of requirements for rating systems to cloud computing services in order to provide enough warranty to users as to trust in the labels assigned to those services and the information they provide in their decision processes to procure cloud services. For this reason, these rating systems are mainly focused in characteristics related with the cloud service outcome (more than technologies used or management system implemented by cloud providers).

The labelling of cloud services according to this standard becomes a powerful methods to provide transparency in the cloud services market, making easier the decision taking processes and contributing to a better way or work of this cloud market, because labels reduce the risk of adverse selection that are present nowadays in asymmetric cloud markets.

Title : Standard Test Method for Total Moisture in Coal
Scope : This standard specified test method of the total moisture in coal as it exists at the site, at the time, and under the conditions it is sampled. It is applicable to coals as mined, processed, shipped, or used in normal commercial pursuits. It is not applicable to coal-water slurries, sludges, or pulverized products under 0.5-mm-diameter sieve size. It is applicable to coals of all ranks within the recognized limitations imposed by oxidation and decomposition characteristics of lower rank coals. Because of its empirical nature, strict adherence to basic principles and permissive procedures are required for valid results. This complete standard is available to producers, sellers, and consumers as a total moisture method when other procedures or modifications are not mutually agreed on.

Title : Plastics -- Determination of the brittleness temperature by impact

Scope : This standard specifies a method for determining the temperature at which plastics are not rigid at normal ambient temperature exhibit brittle failure under specified impact conditions. The method considered, builds on the statistical nature of brittle failure. Some statistical techniques to measure the temperature of brittleness have been developed, as defined in subclause 3.1.

The method sets the temperature at which a sample, with or without notch, produces a 50%

failure. Although this method has been accepted as useful for specification purposes, it does not necessarily measure the lowest temperature at which the material can be used. When measuring the brittle temperature, the accuracy of the measurement should preferably be 5 ° C as worst value when values used in the material specifications are set.

NOTE notched samples can be used as an additional technique. In this case, brittle failures occur at higher temperatures for the same plastic material

Title : Water quality
 Determination of Ammonium in aqueous samples with small-scale sealed-tube method.
Scope : This International Standard specifies a method for the determination of ammonium using the sealed tube method. The test is applicable to aqueous samples, as drinking waters, ground waters, surface waters, waste waters, bathing and mineral waters in a range of concentration between 0,01 and 140 mg/l. The Standard is divided in two parts: direct and after distillation analyses. The determination with the preliminary distillation is required in the presence of high concentration of interfering compounds.

Title : Water quality
 Determination of Total Nitrogen in waste, natural and drinking waters with small-scale sealed-tube method.
Scope : The total bound nitrogen (TN) is formed by all the nitrogen compounds as nitrates, nitrites, ammonium, and organic compounds. The presence of significant concentrations of TN can be interpreted as a pollution index and is a potential risk for the health and the environment. This International Standard specifies a method for the determination of total nitrogen using the sealed tube method. The test is applicable to aqueous samples, as natural waters (including sea waters, after reduction of chloride content after filtration on silver sulphate), drinking waters and waste waters in a range of concentration between 0,5 and 100 mg/l.

National Ref : NEN 8433:2016 Concept en
Title : Boatmen services - Chassis mounted winches - General requirements and safety requirements
Scope : NEN 8433 applies to chassis mounted winches that are used for assistance in mooring and unmooring of all kind of vessels. This standard describes and defines the safety requirements of chassis mounted winches which are electric or hydraulic driven in order to minimize risks arising from the regular operation of the chassis mounted winches. This standard deals with all significant hazards, hazardous situations and events relevant to chassis mounted winches, when these are used as intended and under conditions of misuse which are reasonably foreseeable by the manufacturer, throughout its foreseeable lifetime.

National Ref : ÖNORM A 7700
Title : Information technology - Technical requirements concerning the security of web applications
Scope : This ÖNORM specifies requirements for the security of Web applications. In this context, security is defined as follows: Unauthorized access to data and functionality of the Web application as well as the IT systems behind it is impossible.
This ÖNORM does not apply to upstream firewall systems, surrounding administration systems and network components nor to downstream "legacy" systems
