**Subsector A01: TOURIST SERVICES**

<b>Subsector :</b>	A01	<b>Registration Date :</b>	2018-06-11
<b>Organization :</b>	UNE		
<b>Country :</b>	Spain	<b>Latest Date for Comments :</b>	2018-07-17
<b>Project ID :</b>	P0049837/0001		Draft for public enquiry
<b>ICS :</b>			
<b>National Ref :</b>	PNE 302002		
<b>Title :</b>	Museums. Requirements for the visit service provision.		
<b>Scope :</b>	This standard establishes the requirements that museums and related institutions recognized in relevant legislation (collections, museographic collections, museographic exhibitions and interpretation centers) must comply with in providing visits, services and complementary activities to ensure, facilitate and enrich the experience. of the visitor.		

This standard contemplates requirements for the planning of the museum's activity, the quality management system for the services, facilities and equipment, as well as its cleaning and maintenance.

Food and beverages services, as well as the organization of events are not included in this standard. In the case of food and beverage services, reference is made to the standard UNE 167013.

<b>Subsector :</b>	B09	<b>Registration Date :</b>	2018-06-21
<b>Organization :</b>	ASI		
<b>Country :</b>	Austria		
<b>Project ID :</b>	00027399/0001		Project Established
<b>ICS :</b>	91.120.10		
<b>National Ref :</b>	ÖNORM B 8110-3		
<b>Title :</b>	Thermal protection in building construction - Part 3: Prevention of summerly overheating		
<b>Scope :</b>	<p>The present Austrian Standard applies to all buildings or rooms that serve the permanent or temporary stay of people. It is distinguished between main rooms and ancillary rooms. The main rooms include the actual lounges and their communication routes (eg all rooms in single-family homes, all rooms in apartments, offices and the directly connected corridors, school class and corridor between the classrooms, patient rooms and directly connected corridors). It contains rules for avoiding summer overheating when no mechanical cooling is provided (ventilation systems with or without heat recovery may be taken into account). Regulations for ancillary rooms such as arcades, conservatories, staircases and atria (only used as a traffic area) are also included. Elevator shafts are not regulated in this ÖNORM. This ÖNORM only deals with the summer overheating. An interpretation of spaces to avoid overheating in the transitional season can be analogous. In rooms with a high proportion of glazing, this case may be more important.</p> <p>Compliance with the necessary sound insulation (especially in the case of open windows during the night or permanently operated ventilation systems) is not the subject of this ÖNORM.</p>

**Title :** Smart Cities. Smart station and connection to the Smart City platform  
**Scope :** The scope of this standard is to establish the services, relationships and integrations of Smart stations by applying interoperability and standards to smart cities. For this, the work to be carried out is structured in the following axes of action:

The smart station

- Concept of smart station.
- Definition of the services and characteristics that a smart station must have.

Integration of the station into the smart city:

- Definition of the information of the station that is required by the city for the management of its services.
- Definition of information available on the city platform that is required by the station.
- Standardization of the factors involved in the exchange of information between the city and the station.

Integration of the station with other stations.

- Definition of information available between stations.
- Standardization of the factors involved in the exchange of information between stations.
