National Ref : ÖNORM B 5351

Title : Burglary resistant mechanic / mechatronic building hardware - Locks, striking plates, protective fittings, cylinders, tubular safes and additional products for windows and doors - Dimensions, design, testing and marking

Scope : This Austrian Standard includes provisions concerning design, testing and marking of door locks (main and additional locks), locking plates, cylinders and door furniture from quality controlled production, which are suitable for installation in burglar resistant doors according to ÖNORM B 5338. This ÖNORM refers to provisions for further burglary resistant retrofitting systems for windows and doors according to DIN 18104-1 and -2 (except additional locks). This building hardware may also be used for retrofitting of already installed shutters. Catch fittings and lock sets for drilled receivers (button locks) as well as locks for sliding doors are not covered by the scope of this ÖNORM. Hinges and safety devices for hinges are not dealt with by this ÖNORM either.
This standard also serves the interchangeability of burglary-resistant building hardware and thus for the sustainable use and longevity of burglary-resistant doors and windows.

 Title : Burglar resistant windows, doors and additional shutters - General specifications
 Scope : This Austrian Standard applies to burglar resistant windows, doors (door units) and additional shutters (e.g. rolling shutters, window shutters), namely for single-leaf and multi-leaf elements within the opening types turning, tilting, folding, tilting and turning, swinging, sliding (horizontally and vertically), rolling and folding, as well as for immovable building parts.
 The classification of burglar resistance and the related requirements are specified in ÖNORM EN 1627, the necessary test methods are given in ÖNORM EN 1628, ÖNORM EN 1629 and ÖNORM EN 1630.
 This ÖNORM does not cover the use of vehicles as well as manipulation facilities.
 NOTE 2 Building parts which can be reached or crossed by vehicles should be protected by appropriate measures, such as barriers, telescopic ramps, etc.
 Requirements for bullet proof building parts are not covered by this ÖNORM, but are dealt with by ÖNORM EN 1522.

Title : Sound insulation and room acoustics in building construction - Part 5: Classification
Scope : The present ÖNORM specifies several classes for different requirements which, on the one hand, allow for dwelling activities with higher sound emission (e.g. playing of musical instruments, operation of high-capacity music equipment) and, on the other hand, provide differentiated protection against noise from adjacent units or from outside.

 The present ÖNORM allows to describe and classify buildings with regard to the quality of sound insulation.

Title : Ultrasonic noise -- Requirements for measurements in the work environment
Scope : This Polish Standard specifies a method for measuring ultrasonic noise in the work environment and a method of determining of equivalent sound pressure levels of ultrasonic noise. The measurement method can be applied to all kinds of ultrasonic noise, regardless of the nature of its variation in time. This Poland Standard refers to the sound pressure levels in 1/3 octave bands with the central frequencies from 10 kHz up to 40 kHz. This Polish Standard specifies a method for taking account of amendments related to the influence of the metrological characteristics of the measuring apparatus and the influence of a microphone protective grid on measurement results. The measurement process requires the observation and analysis of the ultrasonic noise exposure conditions in order to control the quality of measurements. Therefore, this Poland Standard allows to estimate uncertainty measurements in order to determine the quality of the measurements. The results of the measurements carried out in accordance with this Polish Standard may provide information useful for the assessment of exposure to ultrasonic noise in the work environment.
